

FISHWATER FLATS BIOGAS FACILITY

FULL CUT — 4:42 · PAPER EDIT FOR ADOBE PREMIERE PRO

Beat-by-beat breakdown of every piece of copy (voiceover, interview SOT, on-screen text) against the currently proposed visual content for each beat, in timeline order. Timecodes are 00:00:00:00-based at 25 fps — matching `premiere/FWF_Full_Cut_V0_Markers.csv`, importable directly as sequence markers (File → Import → Markers).

Beat 01 · 00:00:00:00–00:00:05:00

NO NARRATION

5s

Logo hold over black — ambient music only, no VO.

CONTENT — title card, no footage.

Beat 02 · 00:00:05:00–00:00:15:00

NO NARRATION

10s

No narration — ambient wind/water only.

CONTENT — real satellite aerial approach, slow push to site. Let the pictures open the film.

Beat 03 · 00:00:15:00–00:00:23:00

VOICEOVER

8s

"Fishwater Flats treats more than eighty percent of Gqeberha's wastewater — but for several years its sludge disposal infrastructure has been in disrepair, and the estuary feels it first."

CONTENT — scene-outfall, span 8, plays once. Tone = strained, NOT scandalous.

[outfall.mp4](#)

Beat 04 · 00:00:23:00–00:00:35:00

INTERVIEW SOT

12s

NMBM Official SOT, no VO under it.

CONTENT — outdoor, WWTW perimeter, treatment infrastructure behind subject. Constructive tone — evolving infrastructure need, NOT municipal failure.

Beat 05 · 00:00:35:00–00:00:43:00

ON-SCREEN TEXT

8s

Three stat cards ~2.7 s each, no VO: ~135 ML/day (confirmed) · ~74 t/day dry solids · since 1976.

CONTENT — stat stills. NOTE: statbg_site shows a plant that is NOT FWF — interim only, swap on real site photography.

[statbg_site.jpg](#)

Beat 06 · 00:00:43:00–00:00:49:00

VOICEOVER

6s

"One-point-two million people — and one site at the centre of it all."

CONTENT — regional map → metro map; the idea lands as the map resolves onto Fishwater Flats.

[gmaps_eastern_cape_regional.png](#)

[gmaps_metro_wide.png](#)

Beat 07 • 00:00:49:00–00:00:57:00 **VOICEOVER** 8s

"The Fishwater Flats Biogas Facility is being built on the existing municipal site — turning a liability into a multi-revenue green infrastructure asset."

CONTENT — calibrated CAD footprint overlay on real satellite. Matches on-screen caption.

[cad_overlay_transparent_calibrated.png](#)

Beat 08 • 00:00:57:00–00:01:03:00 **VOICEOVER** 6s

"It begins with what the city already produces — sludge, food waste, fats, oils and greases."

CONTENT — 01 · Feedstock In nodes. BED: blockflow-bg — RECAST to a ≥ 20 s water-treatment plate (current 5.3 s clip freezes for 14.8 s).

Beat 09 • 00:01:03:00–00:01:08:00 **VOICEOVER** 5s

"Three co-digesters break that blend down over twenty-one days."

CONTENT — 02 · Anaerobic Digestion, CSTR node lights. Nm^3/h and methane figures stay ON SCREEN, not in the read — the beat cannot hold them.

Beat 10 • 00:01:08:00–00:01:17:00 **VOICEOVER** 9s

"And what comes out is five things at once — biomethane, electricity, food-grade CO_2 , digestate, and recovered water."

CONTENT — 03 · Products Out, five nodes cascade.

Beat 11 • 00:01:17:00–00:01:24:00 **NO NARRATION** 7s

No VO — genset runs under its own sound.

CONTENT — scene-chp, span 7. $\triangle$ Incumbent shows generic pipe racks, NOT a genset — REAL SHOOT PRIORITY №1 under the film's strongest factual claim.

[chp.mp4](#)

Beat 12 • 00:01:24:00–00:01:38:00 **INTERVIEW SOT** 14s

Straits Energy engineering SOT alone, no VO.

CONTENT — outdoor, standing at the Phase 1 pilot CHP unit.

Beat 13 • 00:01:38:00–00:02:26:00 **ON-SCREEN TEXT** 48s

No VO by design — music drives; title (3 s) + ten impact cards (4.5 s each).

CONTENT — every impact slot span 4.5. Recasts pending clip uploads: 02 → Household_Food_Waste (window vStart 6 / vEnd 10.5 — opening 4 s measures motion 80, too busy under text), 04 → Aerial_WWTP, 07 → Abstract_Alcohol (verified CO_2 tanks), 09 → Wood_Chips (retires the anchovies). Keep 01, 03, 05, 06, 08, 10.

Beat 14 • 00:02:26:00–00:02:42:00 **INTERVIEW SOT** 16s

Straits Energy Principal SOT closes the section, no VO under or after.

CONTENT — indoor, office, warm light.

Beat 15 · 00:02:42:00–00:02:50:00 **VOICEOVER** 8s

"And this isn't a concept. The Phase One pilot is running today – exporting fifty kilowatts into the municipal grid."

CONTENT – Proof of Concept model still, status COMPLETED.

Beat 16 · 00:02:50:00–00:02:57:00 **VOICEOVER** 7s

"The land is there. The feedstock is there. The partnerships are in place."

CONTENT – close-orbital satellite; VO and on-screen caption land together.

[gmaps_site_close_orbital.png](#)

Beat 17 · 00:02:57:00–00:03:05:00 **VOICEOVER** 8s

"All on the existing municipal footprint – between estuary and ocean – where Phase Two will rise, backed by DBSA's Project Preparation Facility."

CONTENT – existing-site map → coastal flythrough base.

[gmaps_flythrough_base.png](#)

Beat 18 · 00:03:05:00–00:03:15:00 **VOICEOVER** 10s

"This is the Phase Two layout – every structure placed from the actual engineering drawings."

CONTENT – CAD-derived site diagram flythrough (real vector-extracted positions).

[cad_overlay_transparent_calibrated.png](#)

Beat 19 · 00:03:15:00–00:03:25:00 **VOICEOVER** 10s

"Three high-solids digesters form the core of the plant, working each blend for around twenty-one days."

CONTENT – full plant model → Triton digester row.

[plant_3d.png](#)

Beat 20 · 00:03:25:00–00:03:35:00 **VOICEOVER** 10s

"Two CHP modules feed up to two megawatts into the works' own grid – while the gas holder and upgrading train turn up to twenty-four hundred cubic metres of raw biogas an hour into pipeline-ready biomethane."

CONTENT – CHP block → gas holder + BGU.

Beat 21 · 00:03:35:00–00:03:45:00 **VOICEOVER** 10s

"A cryogenic unit recovers thirty tonnes of food-grade CO₂ a day – and the receiving zone earns gate fees on every load of organics that arrives."

CONTENT – CO₂ vessel → feedstock receiving.

Beat 22 · 00:03:45:00–00:04:01:00 **INTERVIEW SOT** 16s

Anaergia Africa (EPC technology partner) SOT alone, no VO – disclosure confirmed, name/logo cleared.

CONTENT – indoor, commissioning / plant-floor.

Beat 23 · 00:04:01:00-00:04:16:00

NO NARRATION 15s

No VO — ambient and on-screen stats only; highest-engagement shots in the Victor Valley reference.

CONTENT — scene-cng span 6 (△ shows a valve, not a tube trailer — recast or retitle the beat), scene-co2 span 4, pipeline corridor map. NOTE: on-screen label reads 7.7 km (locked KMZ 7.69 km).

[cng.mp4](#)

[co2.mp4](#)

[gmaps_pipeline_corridor_coast.png](#)

Beat 24 · 00:04:16:00-00:04:27:00

VOICEOVER 11s

"Fishwater Flats Biogas Facility. Powering a sustainable future for Nelson Mandela Bay." Read slowly, let the final seconds breathe.

CONTENT — closing-aerial, span follows beat. △ Incumbent is a European WWTW, not FWF — recast to a dome-digester biogas-plant aerial when uploaded.

[closing_aerial.mp4](#)

Beat 25 · 00:04:27:00-00:04:42:00

NO NARRATION 15s

No VO — end card carries status, indicative timeline, roles and contact. Music fades to silence on the final frame.

Generated from the live VO/content script in fwf-scene.jsx (VO_SCRIPT). Regulator, Investor and Social cuts re-sequence a subset of these beats — re-export per cut once each cut's beat list is finalised.
